

WhisPURR (Kivi)

The Ambient, Invisible Voice Translation Layer

VERSION 2.0
PRODUCT DESIGN
SEPTEMBER 2026

1. Executive Summary & Market Problem

Human speech operates at **140–160 words per minute**, nearly 4× faster than the average typing speed of 40 words per minute. However, voice dictation has historically suffered from an immense *"editing tax"*: traditional speech-to-text engines produce verbatim, raw transcriptions full of filler words, false starts, awkward syntax, and inappropriate registers.

Users spend more time editing and cleaning transcriptions in destination apps than if they had typed from scratch. **WhisPURR eliminates the editing tax** by acting as an ambient, OS-level translation companion that captures natural speech, restructures and polishes it in real-time according to contextual tone and language, and directly types the output into the active window.

THE GEOFFREY MOORE POSITIONING FRAMEWORK

For fast-moving knowledge workers, software engineers, and global communicators

Who suffer from typing fatigue, cognitive context switching, and the editing tax of raw dictation,

WhisPURR is an ambient, desktop voice-to-structured-text OS companion

That effortlessly adapts unscripted human thoughts into application-perfect output with zero editing required.

Unlike raw speech-to-text engines (Apple Dictation, standard Whisper CLI) and heavyweight modal transcription apps,

Our Product features dual radial gesture dials for instantaneous tone/language switching, emotional undertone intelligence, and a persistent bottom-anchored companion that stays quietly in the background.

2. Core User Personas & Pain Points

The Engineering Lead

Pain Point: Constantly switching between high-level architecture thoughts, Slack discussions, terminal bash commands, and git commits.

WhisPURR Value: Developer Mode formats code blocks, git conventions, and technical acronyms instantly without breaking flow.

The Executive / Product Manager

Pain Point: High-volume async communication where tone matters: formal for leadership, casual for team channels, concise for quick decisions.

WhisPURR Value: Alt + Scroll spins between Formal, Casual, and Concise tone profiles in under 300 milliseconds.

The Bilingual / Global Creator

Pain Point: Brainstorming in one language while drafting in another; complex keyboard input method switching.

WhisPURR Value: Dual radial dial with Alt + Right-Click shifts between 10 world languages with real-time streaming translation.

The Deep-Focus Writer

Pain Point: The cursor blinking at a blank page creates cognitive paralysis; hands get fatigued during long writing sessions.

WhisPURR Value: Hold Alt and stream stream-of-consciousness thoughts; WhisPURR synthesizes coherent prose into Notion or Docs.

3. Competitive Differentiation Matrix

DIMENSION	WHISPURR	APPLE DICTATION	WISPR FLOW	AUDIOOPEN
Zero-Tax Restructuring	✓ Real-time LLM polish	✗ Verbatim only	✓ Basic rewording	✓ Summary only
Dual Radial Dials	✓ Modes + Langs on wheel	✗ None	✗ None	✗ None
Emotion & Mood Nuance	✓ Expressive Moods (🔥 /off)	✗ None	✗ None	✗ None
Direct In-App Typing	✓ Native OS hook injection	✓ Native insertion	✓ Insertion	✗ Separate web app
Visual Delight & Presence	✓ Tactile, vibrant Mac craft	✗ Utility microphone icon	Minimal bar Browser tab	

4. Key Value Propositions

- **Instantaneous Fluidity:** Hold Alt to speak, release to paste. No separate windows to navigate or copy-paste loops.
- **Semantic Dexterity:** 8 distinct tone profiles engineered to eliminate rewriting across different corporate registers.
- **Emotional Undertone Intelligence:** Speech communicates feeling; WhisPURR senses enthusiasm, warmth, or directness and enhances prose accordingly.
- **Quiet Companionship:** Resting unobtrusively at the bottom edge, WhisPURR is a trusted, friendly presence that empowers rather than distracts.
